

Multi-Room Multi-Zone System

Suite 16 is the most advanced multi-room stereo system available and can be controlled by ADA keypads, touch-screen systems, or PCs. Suite 16 combines exceptional acoustical control along with extensive paging features.

Based on ADA's modular design, Suite 16 is configured using a suite of cards. The AVP-16 chassis houses up to three cards and several AVP-16s can be linked together. A system requires only one A-16 Audio Input card which routes sixteen audio components. The P-16 module provides preamplification for sixteen independent rooms and six P-16s can be used in a single system for up to 96 zones. The V-16 Video Switching module routes sixteen video signals to sixteen rooms and is also expandable.

Beyond all of these design features, Suite 16 is an amazing sounding whole-house system. In addition to volume, you can also adjust bass, treble, balance, as well as stereo enhancement and loudness contour control. Settings permit down-mixing to mono for hallways and galleries. Rooms turn on to an acoustical preset and each room also features a maximum volume level. Suite 16 even includes Party functions that make it easy to entertain.

- **16 Audio & Video Inputs**
- **16 Zones up to 96 Zones**
- **Advanced Control**
