

TBUS-1

Kramer's new TBUS-1 is an outstanding furniture-mounted cable management solution. It is very high quality, aesthetic, and offers interchangeable connector modules to provide exactly the signal support required in any given professional environment.

- Versatile - Allows connection of any equipment to the room's presentation system via cable access or passive interfaces.
- Elegant Rugged Design - It is a sturdy and attractive steel enclosure designed to provide maximum connectivity in the smallest possible footprint, at the same time cost-effective and easy to install.
- Easy Installation - Requires tools and expertise to cut a 5" x 7" (128mm x 179mm) rectangular hole in the surface of the furniture. Maximum table thickness is 1 5/8" (41mm).
- Easy Operation - Once installed, only the black-textured lid is visible with a special opening for cables to exit neatly. When not in use the lid closes to hide and protect cables and connectors.
- Versatile Connectivity - Provides an AC socket and six slots for Kramer connector insert modules. Two of the slots come already populated with cable pass through inserts and blank plates are installed in the remaining four slots in case of future expansion.
