**MIDDLE ATLANTIC PRODUCTS ERK ENCLOSURES ENSURE SECURE  
MOUNTING OF ACCESS CONTROL TECHNOLOGY EQUIPMENT FOR  
ADVANCED VIDEO**

ORLANDO, FLORIDA, September 12, 2005 — In a number of recent installations, Advanced Video Surveillance of Fairfield, NJ called upon the quality construction and advanced cable management functionality of Middle Atlantic Products' ERK Series enclosures. With its robust design, ERK enclosures have provided the security and reliability required by Advanced Video Surveillance and they now make Middle Atlantic Products ERK Series enclosures standard in their installations.

"We like the ERK enclosure because of its high quality construction and cable management features," said Michael Riotto of Advanced Video. "Our access control systems are installed in all kinds of locations, with some racks even on casters for mobility, so durability and cable management are critical to success."

Advanced Video Surveillance's most recent installations include a police department, a college and a public school surveillance and access system. The most common configuration calls for a short, 21-space rack to house the access control computer, accompanied by a rack mounted pullout keyboard, digital recorder, and camera power supplies. Monitors may either be placed on top of the rack or rack-mounted, depending on the needs of the facility.

The versatility of the ERK Series design and the immediate availability of a wide array of accessories allows Advanced Video Surveillance's integration team to configure enclosures according to each application — enabling open access to the monitoring and recording technology or alternatively limiting security staff access to just the displays and control devices. The advanced cable management features with laser knockouts allow easy routing of cable for any equipment in

any installation, making for a neat and professional installation. The company's integrators pre-load the ERK Series enclosure in their facility and transport the completed system to the site. The ERK Series front rails and well-designed cable management features ensure that Advanced Video Surveillance completes each job in the most cost effective manner.

### **About Middle Atlantic Products**

Headquartered in Riverdale, New Jersey, Middle Atlantic Products, Inc. is an ISO 9001:2000-registered leading manufacturer of state-of-the-art steel enclosure systems for a wide range of applications, including the security, structured cabling, commercial audio video, broadcast and post production and premise wiring markets. Dedicated to the proposition that the enclosure system is as important as the equipment it protects, the company incorporates application-driven engineering into every system it designs in order to meet the individualized requirements of the broadest range of installers.
