

DIN Panels and Accessories

The Lutron® family of DIN rail panels are designed to accept the Lutron® DIN power modules (DPMs). The DPMs can be configured in the panel to control multiple load types that fit the size, lighting plan and design of a home. The control panels have a control gear compartment that can house up to 2 processors, DMX and/or IO interfaces, 2 Wire Landing Boards (WLB), and 1 power supply. The satellite panels replace the control gear compartment with a mounting bracket to add an additional DPM. Panels may be either surface-mounted or recess-mounted in an electrical closet or other equipment room. There are feed-through, MCB and RCBO breaker options available for each panel size and type. For each DPM type, there is a terminal kit available as well as a wiring harness. There is also a QS harness for wiring from DPM to DPM. Other options include blanking plates for unused module positions and a reversible hinged door.
