Made in Austria

Apple certified

iRoom's iTop Plus with iPad lock and built-in control processor is a 3 in 1 tabletop solution that stores and charges the iPad. The adjustable lighting connector fits any actual iPad model. iTop Plus also locks the iPad through a code-protected mechanical bar. This secures the iPad and makes it very hard for thieves to take the iPad out and steal it. The built-in control processor provides control functionality through 6- Quick Keys on the glass faceplate. Any IP command can be assigned to the Quick Keys through iRoom's iPad app in order to control commonly used functions such as lights, blinds, volume or source select in a control environment. iTop Plus can also be integrated with all major control systems such as Crestron, AMX, RTI, Control4, Savant to be used as a control device for these control systems. For direct control of devices that don't have an LAN port the optional wireless iO83 or iO83Shade provides high voltage relays that switch devices on or off such as lights or blinds.
